SUMMARY

Software engineer with 4+ years in tech, building production SaaS with Node.js, Vue.js, PostgreSQL and AWS. I currently work on a platform used by 50+ police departments across the US, building its policy management software, a configurable form builder, and the single sign-on Hub that connects every app.
Finishing an MSc in Cloud Computing.

EXPERIENCE

Software Engineer — Vitech, Skopje

Feb 2023 – Present

- Currently developing 3 products in **Departmentware**, a SaaS platform used by 50+ police departments across the US (TypeScript, Node.js, GraphQL, Vue.js): Policy Management, Intel Forms (a configurable form builder) and the central Hub with single sign-on across all apps.
- Review pull requests, onboard new developers, and handle releases (Docker, CI/CD) and production issues across the products.
- Built an AI knowledge base over all agency policies (RAG), shared across products so users can ask policy questions from any app.
- Delivered 10+ full-stack applications for internal and external clients, including AI features such as image-similarity search and chat assistants (OpenAI, Gemini, Amazon Titan).
- Built background processing on AWS with SQS queues, S3 file storage and SES email notifications.

BSS Operations Specialist — A1 Macedonia, Skopje

Jun 2022 – Dec 2022

- Monitored the availability and performance of production databases supporting A1's business support systems (BSS); troubleshooted and optimized SQL queries.

Data Analyst Intern — A1 Macedonia, Skopje

Feb 2022 – Jun 2022

- Built machine-learning models for sales improvement and fraud detection, and analyzed marketing data.

PROJECTS

- **AWS Cost Management System (MSc thesis, in progress):** forecasts AWS spend and flags idle resources, uses RAG over CloudTrail to explain who created each resource and whether it's safe to stop, and lets an operator approve each action, run by a Lambda limited to tagged resources.
- **AI Assistants with RAG:** assistants and LLM integrations built at work and in personal projects with the OpenAI, Llama and Amazon Titan APIs, including a news assistant that returns cited articles for any topic.
- **Sales Prediction with Machine Learning (BSc thesis):** sales forecasting with XGBoost and a stacked SARIMAX + OLS model (Python).
- **Data Warehouse CRM:** CRM built for a client. Used for managing products, deals, offers and invoices, with built-in meeting scheduling (Vue.js, Node.js, MySQL).
- **Fantasy Football Platform:** worldwide rankings, multiple leagues and budget-based team selection, with points calculated every matchweek.

EDUCATION

MSc Computer Science (Cloud Computing) — UKIM, FINKI (Skopje)

2025 – Present

BSc Computer Systems Engineering, Automation and Robotics — UKIM, FEIT (Skopje)

2018 – 2022

SKILLS

Core stack: TypeScript, JavaScript, Node.js, Vue.js, React, GraphQL, REST APIs, Python, SQL

Databases: PostgreSQL, MySQL, Firebase (NoSQL)

Cloud & DevOps: AWS (Lambda, S3, SQS, SES, IAM, CloudTrail, Bedrock), Docker, CI/CD, Git, Linux

AI / LLMs: OpenAI, Gemini, Amazon Titan, RAG, embeddings

Languages: English (fluent / C1), Macedonian (native), Serbian/Croatian (fluent)

Interests: AI & ML | Coding | Reading | Sports | Fitness | Basketball
